Writing to an excel sheet

Was this post helpful ? Yes No

Hey guys, I'm trying to write to an excel file from my program. I have a button and a text box. this is what I have in my button_click event.

```
Dim G4 As Object

wb = dlj.Workbooks.Open("tx plan templates.xls")

wb.Application.Range(G4).Value = txtName.Text

dlj.Visible = True
```

If I remove the middle code, the sheet opens up fine. I'm just trying to write to a specific cell in the excell sheet.

Life is what you make it, so code properly! \x01A4

So does anyone know how I can write to a specific cell? I'm I close or way off?

Here is some code which will do what you want - instead of opening an existing excel file - I'm creating one. And then at the end I'm saving it and closing the workbook.

This should get you going....

```
Dim oExcel As New Excel.Application

Dim oWorkbook As Excel.Workbook = oExcel.Workbooks.Add
oExcel.Visible = True

oWorkbook.Worksheets.Add()
Dim xlws As Excel.Worksheet = oWorkbook.Worksheets.Item(1)

xlws.Range("A1").Value = TextBox1.Text
xlws.SaveAs("C:\test.xls")
oExcel.Workbooks.Close()
```

Thanks spotty. I'll try it out as soon as I get home! 😃
